Plants spec

Plant	Variety	Days to Harvest	Depth	Thin To	Plants diameter	Notes
Swiss Chard	<i>Burpee's Rhubarb Chard</i>	60	1/2"	12" apart	12	Crimson ribs like rhubarb, sweet leaves. Keep soil moist; seedlings emerge in 7–14 days.
Kale	<i>Premier</i>	55–65	1/4"	18" apart	12	Great for baby greens or mature leaves. Nutrient-rich. Seedlings in 10–21 days.
Lettuce	<i>Black Seeded Simpson</i>	45	1/4"	8" apart	3	Crisp, frilled leaves with delicate flavor. Sow every 2 weeks for continuous harvest.
Baby Bok Choy	<i>Baby Choi</i>	50	1/4"	10-12" apart	6-7	Fast-growing, tender green leaves. Keep soil moist; sprouts in 10–21 days.
Spinach	<i>Salad Sensation Hybrid</i>	22–55	1/2"	6" apart	1.7	Semi-savoy leaves for salads or freezing. Sow in early spring or late summer.

Plants spec

Plant	Optimal Temperature	Optimal Humidity	Growth Tips
Swiss Chard	☀️☐16–24°C	🕯 60–70%	Growth slows and leaves get tough above 30°C. Maintain steady moisture for tender stalks.
Kale	☀️☐15–21°C	🕯 50–70%	Prefers cool weather. Leaves become coarse above 25°C. Slightly cooler nights help flavor.
Lettuce	☀️☐12–20°C	🕯 60–80%	Very heat-sensitive; bolts easily above 24°C. Cool, moist conditions produce the best leaves.
Baby Bok Choy	☀️☐13–22°C	🕯 60–70%	Sudden temperature rises trigger bolting. Keep temperature and moisture consistent.
Spinach	☀️☐10–18°C	🕯 55–70%	Thrives in cool weather. Growth slows and leaves taste bitter above 24°C.

KALE
Premier

VEGETABLE
Kale
Premier

Deep green, slightly scalloped leaves are great for baby greens or used at full maturity. Exceptional nutritional value.

SOW in full sun in early spring; midsummer for fall crop. In Deep South, Gulf and Pacific Coast areas, sow from fall to early spring. Plant seeds evenly and thinly and cover with 1/4" of fine soil. Firm lightly. Plants emerge in 10-21 days. Thin 18" apart.
